

## EVault Implementation Services

### Key Benefits

- Thorough planning
- Optimized configuration
- Effective administration
- Comprehensive documentation

EVault® Implementation Services ensure you effectively deploy your solution. Our consultants work with you to develop a data protection strategy, set goals, and implement a solution to meet your business needs. Our streamlined implementation process gets you up and running quickly and easily—often in just a few days—to begin reaping the benefits of our solutions. Once implementation is complete, our consultants provide you with a Data Protection and Backup Plan, a blueprint for your EVault solution. This document helps you comply with regulatory audits, effectively manage the solution, train new employees, and easily upgrade your environment in the future by providing a details on how your solution was implemented.

### Thorough Planning

The first stage of implementation is planning. Our consultants help you develop a data protection strategy that meets your company's needs. We assess many factors, including: hardware and software environment, regulatory compliance requirements, security/risk tolerance, geographic locations, and deployment architecture to come up with a data protection strategy that meets your business needs. All of this information is documented in a custom Data Protection Backup Plan.

### Optimized Installation and Configuration

Following the development your custom Data Protection and Backup Plan, an experienced Professional Services consultant visits your site to help install all components of EVault Software, including the Vault, Agents and CentralControl. In addition, we help you configure backups and begin the seeding process. Our consultants ensure the configuration is tuned for your environment and can also develop custom scripts to ensure that all applications are properly protected.

### Effective Administration

While onsite we walk-through all of the EVault software components so you know how to effectively manage the solution, from setting up backups using our Agents to managing the Vault with the Director and running storage maintenance tasks. After our consultant completes the implementation, your customized Data Protection and Backup plan will be delivered to you so you know how to effectively manage the solution on your own.

Professional Services  
EVault Implementation  
Services

EVault Implementation Services are part of the EVault Professional Services continuum of services that help you effectively deploy an EVault solution.
