EVault® Data Protection is trusted by hundreds of credit unions. Since 1997, we've delivered complete solutions based on world-class EVault technology that are easy to use, scalable, and customized to suit your needs.

Certified, Compliant Security and Privacy

EVault technology assures that your backed-up data complies fully with NCUA regulations, parts 748 and 749, for protecting sensitive data and retaining electronic records. With EVault you also conform to NCUA guidelines for encrypting electronic data: FIPS-approved, 256-bit AES encryption shields your data in transit and in storage, and there's no "back door" to let anyone view protected information, not even EVault.

100% Disaster Recovery

Among your peers who have suffered disasters, many chose EVault so they can say, "Never again." You get the fastest, most reliable disk-to-disk backup and recovery available. When you purchase EVault Software, you can back up data to your own hot site or disaster recovery site, or arrange to have EVault host it for you. In addition, our Professional Services team can help you devise and test emergency procedures and conduct training based on your specific needs. If disaster strikes, you're covered.

Central Control and Brilliant Simplicity

Everything is easy, from setup and scheduling to reporting and restores. That includes your core servers, remote locations anywhere on your network, and laptops that connect to it. EVault's Web CentralControl lets you manage it all from anywhere with a Web connection. You control costs—no more productivity lost needlessly to the restore process. And you get support from expert insiders, at no cost—24/7 for critical issues.

Broad Platform Support

You can use EVault Software in nearly any combination of platforms and applications including Windows, Novell NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, IBM System i, VMware, Microsoft SharePoint, Microsoft Exchange, Microsoft SQL Server, Microsoft Cluster Services, and Oracle.

Vertical Solution
Why EVault Software
for Credit Unions?

“We needed a solution that provided encryption for information stored offsite. EVault provides this added layer of security.”

Tim Burch,
VP, Technology
